SUMMARY

Quality Assurance Engineer with 6+ years of experience across full-stack development and quality assurance, including 3+ years specializing in manual QA, application security, and end-to-end test execution. Serves as release gatekeeper for weekly production releases across multiple web platforms, combining structured test planning, defect management, and UAT coordination with automated security scanning and hands-on penetration testing to safeguard application integrity. Proven ability to independently own QA processes across multiple concurrent projects in structured and regulated environments, including leading evidence-gathering and documentation for ISO 27001:2022 certification.

EXPERIENCE

Quality Assurance Engineer Experd Consultant ↗	01/2023 - Present
- Independently own QA activities for web-based applications across full release cycles, serving as release gatekeeper for weekly production releases across multiple websites - Perform end-to-end test planning, test case creation, execution, and defect tracking, and coordinate User Acceptance Testing (UAT) with stakeholders for business validation - Conduct manual QA testing alongside automated security scanning and hands-on penetration testing, uncovering 100+ vulnerabilities to date - Work closely with developers to analyze issues, reproduce bugs, and ensure quality standards across multiple concurrent QA streams/projects - Lead evidence collection and documentation for ISO 27001 audits, including 2024–2025 surveillance audits and the 2026 first-time ISO 27001:2022 certification - Improve testing structure and documentation using self-built Kanban boards and Google Sheets	
Full Stack Developer Experd Consultant ↗	01/2020 - 12/2022
- Built a company-wide inventory management application from scratch using HTML, CSS, and JavaScript with a MySQL database, enabling IT asset tracking across laptops, printers, and other peripherals - Customized recruitment portal websites for enterprise and state-owned enterprise (SOE) clients, adapting branding, document requirements, and application workflows per client - Owned end-to-end development across assigned projects, from requirements through deployment
